

RADIO TEST REPORT

Applicant: Nebra Ltd

Address: Unit 4 Bells Yew Green Business Court, Bells Yew Green, East Sussex, United Kingdom

Manufacturer: Shenzhen Eastech Company Limited.

Address: 2nd floor, 3rd building, Baishixia Development Area, Fuyong Street, Bao'an District, Shenzhen City, Guangdong Province, China.

EUT: 150Mbps 2 in 1 Bluetooth wifi adapter

Trade Mark: N/A

Model Number: FX-8723B

Date of Receipt: Jun. 17, 2021

Test Date: Jun. 17, 2021 - Jun. 24, 2021

Date of Report: Jun. 24, 2021

Prepared By: Shenzhen DL Testing Technology Co., Ltd.

Address: 101-201, Building C, Shuanghuan, No.8, Baoqing Road, Baolong Industrial Zone, Baolong Street, Longgang District, Shenzhen, Guangdong, China

Applicable Standards: ETSI EN 300 328 V2.2.2 (2019-07)

Test Result: Pass

Report Number: DL-20210624009-4E

Prepared (Engineer): Alisa Song

Reviewer (Supervisor): Jack Bu

Approved (Manager): Jade Yang

This test report is based on a single evaluation of one sample of above mentioned products. It is not permitted to be duplicated in extracts without written approval of Shenzhen DL Testing Technology Co., Ltd.

3. GENERAL INFORMATION

3.1 Description of Device (EUT)

EUT: 150Mbps 2 in 1 Bluetooth wifi adapter
Trade Mark: N/A
Model Number: FX-8723B
Test Model: FX-8723B
Model difference: N/A
Power Supply: DC 5V from USB
Receiver Category: 3
Operation Frequency: 2402~2480 MHz
Modulation Type: GFSK, PI/4 DQPSK, 8DPSK
Number of Channel: 79
Bit Rate of Transmitter: 1/2/3Mbps
Antenna Type: Internal Antenna
Antenna Gain: 2dBi
Receiver Category: 1
Hardware Version: ---
Software Version: ---
Firmware: ---

Note1: For a more detailed features description, please refer to the manufacturer's specifications or the User's Manual.

| Channel List | | | | | | | |
|--------------|-----------------|---------|-----------------|---------|-----------------|---------|-----------------|
| Channel | Frequency (MHz) | Channel | Frequency (MHz) | Channel | Frequency (MHz) | Channel | Frequency (MHz) |
| 00 | 2402 | 21 | 2423 | 40 | 2442 | 61 | 2463 |
| 01 | 2403 | 22 | 2424 | 41 | 2443 | 62 | 2464 |
| 02 | 2404 | 23 | 2425 | 42 | 2444 | 63 | 2465 |

| 20 | 2422 | 39 | 2441 | 60 | 2462 | 78 | 2480 |

ANNEX E.2

a) The type of wideband data transmission equipment:

- ☒ FHSS
☐ non-FHSS

**b) In case of FHSS:**

- In case of non-Adaptive FHSS equipment:
The number of Hopping Frequencies:
- In case of Adaptive FHSS equipment:
The maximum number of Hopping Frequencies: 79
The minimum number of Hopping Frequencies: 79
- The (average) dwell time:

c) Adaptive / non-adaptive equipment:

- ☐ non-adaptive Equipment
- ☒ adaptive Equipment without the possibility to switch to a non-adaptive mode
- ☐ adaptive Equipment which can also operate in a non-adaptive mode

d) In case of adaptive equipment:

- The Channel Occupancy Time implemented by the equipment: ms
- ☐ The equipment has implemented an LBT mechanism
- In case of non-FHSS equipment:
 - ☐ The equipment is Frame Based equipment
 - ☐ The equipment is Load Based equipment
 - ☐ The equipment can switch dynamically between Frame Based and Load Based equipment
- The CCA time implemented by the equipment: μ s
- ☒ The equipment has implemented a DAA mechanism
- ☐ The equipment can operate in more than one adaptive mode

e) In case of non-adaptive Equipment:

- The maximum RF Output Power (e.i.r.p.): -0.73dBm
- The maximum (corresponding) Duty Cycle: %
- Equipment with dynamic behaviour, that behaviour is described here. (e.g. the different combinations of duty cycle and corresponding power levels to be declared):

f) The worst case operational mode for each of the following tests:

- RF Output Power
GFSK
- Power Spectral Density
GFSK
- Duty cycle, Tx-Sequence, Tx-gap
GFSK
- Accumulated Transmit time, Frequency Occupation & Hopping Sequence (only for FHSS equipment)
.....
- Hopping Frequency Separation (only for FHSS equipment)
.....
- Medium Utilisation
.....
- Adaptivity & Receiver Blocking
.....
- Nominal Channel Bandwidth
1MHz
- Transmitter unwanted emissions in the OOB domain

GFSK

- Transmitter unwanted emissions in the spurious domain

GFSK

- Receiver spurious emissions

GFSK

g) The different transmit operating modes (tick all that apply):

- ☒ Operating mode 1: Single Antenna Equipment
- ☒ Equipment with only one antenna
- ☐ Equipment with two diversity antennas but only one antenna active at any moment in time
- ☐ Smart Antenna Systems with two or more antennas, but operating in a (legacy) mode where only one antenna is used (e.g. IEEE 802.11™ legacy mode in smart antenna systems)
- ☐ Operating mode 2: Smart Antenna Systems - Multiple Antennas without beam forming
- ☐ Single spatial stream/Standard throughput/(e.g. IEEE 802.11™ legacy mode)
- ☐ High Throughput (> 1 spatial stream) using Nominal Channel Bandwidth 1
- ☐ High Throughput (> 1 spatial stream) using Nominal Channel Bandwidth 2

NOTE1: Add more lines if more channel bandwidths are supported.

- ☐ Operating mode 3: Smart Antenna Systems - Multiple Antennas with beam forming
- ☐ Single spatial stream/Standard throughput (e.g. IEEE 802.11™ legacy mode)
- ☐ High Throughput (> 1 spatial stream) using Nominal Channel Bandwidth 1
- ☐ High Throughput (> 1 spatial stream) using Nominal Channel Bandwidth 2

NOTE2: Add more lines if more channel bandwidths are supported.

h) In case of Smart Antenna Systems:

- The number of Receive chains:
- The number of Transmit chains:
- ☐ symmetrical power distribution
- ☐ asymmetrical power distribution

In case of beam forming, the maximum (additional) beam forming gain: dB

NOTE: The additional beam forming gain does not include the basic gain of a single antenna.

i) Operating Frequency Range(s) of the equipment:

- Operating Frequency Range 1: 2402 MHz to 2480 MHz
- Operating Frequency Range 2: MHz to MHz

NOTE: Add more lines if more Frequency Ranges are supported.

j) Occupied Channel Bandwidth(s):

- Nominal Channel Bandwidth 1: 0.877MHz
- Nominal Channel Bandwidth 2: 1.231MHz

NOTE: Add more lines if more channel bandwidths are supported.

k) Type of Equipment (stand-alone, combined, plug-in radio device, etc.):

- ☒ Stand-alone
- ☐ Combined Equipment
- ☐ Plug-in radio device
- ☐ Other

l) The normal and the extreme operating conditions that apply to the equipment:

Normal operating conditions (if applicable):

Operating temperature: 25° C

Other (please specify if applicable):

Extreme operating conditions:

Operating temperature range: Minimum: -20 °C Maximum 55°C

Other (please specify if applicable): Minimum: Maximum

Details provided are for the: ☐ stand-alone equipment

☒ combined (or host) equipment

☐ test jig

m) The intended combination(s) of the radio equipment power settings and one or more antenna assemblies and their corresponding e.i.r.p. levels:

• Antenna Type

☒ Integral Antenna (information to be provided in case of conducted measurements)

Antenna Gain: 2 dBi

If applicable, additional beamforming gain (excluding basic antenna gain): dB

☐ Temporary RF connector provided

☐ No temporary RF connector provided

☐ Dedicated Antennas (equipment with antenna connector)

☐ Single power level with corresponding antenna(s)

☐ Multiple power settings and corresponding antenna(s)

Number of different Power Levels:

Power Level 1: dBm

Power Level 2: dBm

Power Level 3: dBm

NOTE 1: Add more lines in case the equipment has more power levels.

NOTE 2: These power levels are conducted power levels (at antenna connector).

- For each of the Power Levels, provide the intended antenna assemblies, their corresponding gains (G) and the resulting e.i.r.p. levels also taking into account the beamforming gain (Y) if applicable

Power Level 1: -0.73 dBm

Number of antenna assemblies provided for this power level:

| Assembly # | Gain (dBi) | e.i.r.p. (dBm) | Part number or model name |
|------------|------------|-------------------|---------------------------|
| 1 | 2 | -0.73 | |
| 2 | | | |
| 3 | | | |
| 4 | | | |

NOTE 3: Add more rows in case more antenna assemblies are supported for this power level.

Power Level 2: dBm

Number of antenna assemblies provided for this power level:

| Assembly # | Gain (dBi) | e.i.r.p. (dBm) | Part number or model name |
|------------|------------|-------------------|---------------------------|
| 1 | | | |
| 2 | | | |
| 3 | | | |
| 4 | | | |

NOTE 4: Add more rows in case more antenna assemblies are supported for this power level.

Power Level 3: dBm

Number of antenna assemblies provided for this power level:

| Assembly # | Gain (dBi) | e.i.r.p. (dBm) | Part number or model name |
|------------|------------|-------------------|---------------------------|
| 1 | | | |
| 2 | | | |
| 3 | | | |
| 4 | | | |

NOTE 5: Add more rows in case more antenna assemblies are supported for this power level.

n) The nominal voltages of the stand-alone radio equipment or the nominal voltages of the combined equipment or test jig in case of plug-in devices:

Details provided are for the: ☐ stand-alone equipment

☒ combined equipment

☐ test jig

Supply Voltage ☐ AC mains State AC voltage V

☒ DC State DC voltage : 5V

In case of DC, indicate the type of power source

☐ Internal Power Supply

☐ External Power Supply or AC/DC adapter

☐ Battery: V

☐ Other:

o) Describe the test modes available which can facilitate testing:

The EUT can be into the Engineer mode for testing.

p) The equipment type (e.g. Bluetooth®, IEEE 802.11™, IEEE 802.15.4™, proprietary, etc.):

Bluetooth

q) If applicable, the statistical analysis referred to in clause 5.4.1 q)

(to be provided as separate attachment)

r) If applicable, the statistical analysis referred to in clause 5.4.1 r)

(to be provided as separate attachment)

s) Geo-location capability supported by the equipment:

☐ Yes

☐ The geographical location determined by the equipment as defined in clause 4.3.1.13.2 or clause 4.3.2.12.2 is not accessible to the user

☒ No

ANNEX E.3

From all combinations of conducted power settings and intended antenna assembly(ies) specified in clause 5.4.1 m), specify the combination resulting in the highest e.i.r.p. for the radio equipment.

Unless otherwise specified in ETSI EN 300 328, this power setting is to be used for testing against the requirements of ETSI EN 300 328. In case there is more than one such conducted power setting resulting in the same (highest) e.i.r.p. level, the highest power setting is to be used for testing. See also ETSI EN 300 328, clause 5.3.2.3.

Highest overall e.i.r.p. value: dBm

| | |
|---|----------------------------------|
| Corresponding Antenna assembly gain: dBi | Antenna Assembly #: |
| Corresponding conducted power setting: dBm (also the power level to be used for testing) | Listed as Power Setting #: |

ANNEX E.4.1

ITU Class(es) of emission:

Can the transmitter operate unmodulated? ☐ yes ☐ no**ANNEX E.4.2**

The transmitter is intended for: ☐ Continuous duty
☐ Intermittent duty
☐ Continuous operation possible for testing purposes

ANNEX E.4.3

- ☐ The equipment submitted are representative production models
☐ If not, the equipment submitted are pre-production models?
☐ If pre-production equipment are submitted, the final production equipment will be identical in all respects with the equipment tested
☐ If not, supply full details

ANNEX E.4.4

- ☐ Spare batteries (e.g. for portable equipment)
☐ Battery charging device
☐ External Power Supply or AC/DC adapter
☐ Test jig or interface box
☐ RF test fixture (for equipment with integrated antennas)
☐ Combined equipment Manufacturer:
Model #:
Model name:
☐ User Manual
☐ Technical documentation (Handbook and circuit diagrams)

3.2 Tested System Details

None.

3.3 Block Diagram of Test Set-up

EUT

3.4 Test Mode Description

| Mode | data rate (Mbps) | Channel | Frequency (MHz) |
|------------|------------------|--------------|-----------------|
| GFSK | 1 | Low: CH1 | 2402 |
| | 1 | Middle: CH39 | 2441 |
| | 1 | High: CH78 | 2480 |
| PI/4 DQPSK | 2 | Low: CH1 | 2402 |
| | 2 | Middle: CH39 | 2441 |
| | 2 | High: CH78 | 2480 |
| 8DPSK | 3 | Low: CH1 | 2402 |
| | 3 | Middle: CH39 | 2441 |
| | 3 | High: CH78 | 2480 |

3.5 Test Conditions

| | Normal Conditions | Extreme Conditions | |
|-------------------|-------------------|--------------------|-----------------|
| Temperature range | 25°C | HTHV | DC 5.5V, 55°C° |
| | | HTLV | DC 5.5V, -20°C° |
| Power supply | DC 5V | LTLV | DC 4.5V, -20°C° |
| | | LTHV | DC 4.5V, 55°C° |

Note 1: The test procedure described in clause 5.1 of EN300 328 was used for extreme test procedure.
2: The Extreme Temperature and Extreme Voltages declared by the manufacturer.

3.6 Test Uncertainty

| Item | MU | Remark |
|---|--------------------|-------------|
| Uncertainty for Conducted Emission Test | 2.50dB | |
| Uncertainty for Radiation Emission test in 3m chamber (30MHz to 1GHz) | 3.04dB | Polarize: V |
| | 3.02dB | Polarize: H |
| Uncertainty for Radiation Emission test in 3m chamber (Above) | 3.56dB | Polarize: H |
| | 3.84dB | Polarize: V |
| Uncertainty for radio frequency | 1×10^{-9} | |
| Uncertainty for conducted RF Power | 0.65dB | |
| Uncertainty for temperature | 0.6°C° | |
| Uncertainty for humidity | 1% | |

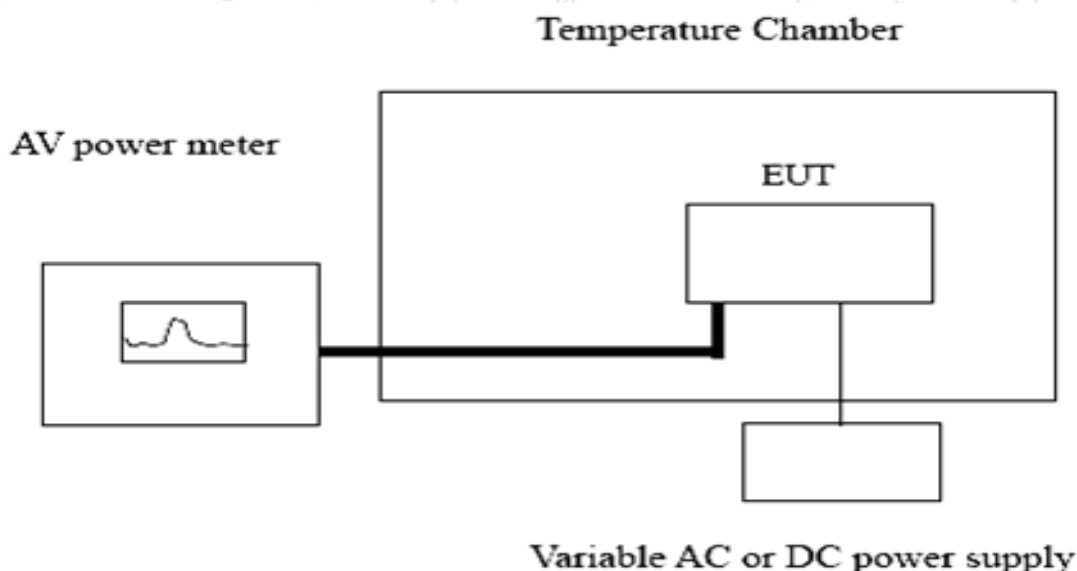

4. TEST INSTRUMENT USED

5. RF OUTPUT POWER

5.1 Block Diagram of Test Setup

5.2 Limit

The RF output power for non-FHSS equipment shall be equal to or less than 20 dBm.

Notes: For Non-adaptive FHSS equipment, the manufacturer may have declared a reduced RF Output Power (see clause 5.4.1 m)) and associated Duty Cycle (see clause 5.4.1 e)) that will ensure that the equipment meets the requirement for the Medium Utilization (MU) factor further described in clause 4.3.2.5.

This is verified by the conformance test referred to in clause 4.3.2.5.4.

For non-adaptive non-FHSS equipment, where the manufacturer has declared an RF output power of less than 20 dBm e.i.r.p., the RF output power shall be equal to or less than that declared value.

5.3 Test Procedure

Refer to ETSI EN 300 328 V2.2.2 Clause 5.4.2.2.1.2

5.4 Test Result

| Total e.i.r.p (dBm) Result | | | | | | | | |
|----------------------------|---------|-----------|-------|-------|-------|-------|-------------|--------|
| Mode | Test CH | Condition | | | | | Limit (dBm) | Result |
| | | Normal | HTLV | LTLV | LTHV | HTHV | | |
| GFSK | Low | -0.92 | -0.96 | -0.87 | -0.84 | -0.83 | 20.00 | Pass |
| | Middle | -0.96 | -0.94 | -0.87 | -0.80 | -0.75 | 20.00 | Pass |
| | High | -0.97 | -0.91 | -0.88 | -0.83 | -0.76 | 20.00 | Pass |
| PI/4DQPSK | Low | -0.97 | -0.73 | -0.87 | -0.84 | -0.81 | 20.00 | Pass |
| | Middle | -0.98 | -0.74 | -0.77 | -0.80 | -0.78 | 20.00 | Pass |
| | High | -0.87 | -0.75 | -0.88 | -0.83 | -0.74 | 20.00 | Pass |
| 8DPSK | Low | -0.87 | -0.81 | -0.77 | -0.84 | -0.83 | 20.00 | Pass |
| | Middle | -0.88 | -0.87 | -0.87 | -0.80 | -0.88 | 20.00 | Pass |
| | High | -0.87 | -0.78 | -0.87 | -0.82 | -0.75 | 20.00 | Pass |

6. DUTY CYCLE, TX-SEQUENCE, TX-GAP

6.1 Block Diagram of Test Setup

6.2 Limit

Non-adaptive FHSS equipment shall comply with the following:

- The Duty Cycle shall be equal to or less than the maximum value declared by the manufacturer.
- The maximum Tx-sequence time shall be 5 ms.
- The minimum Tx-gap time shall be 5 ms.

NOTE: For Non-adaptive FHSS equipment, the manufacturer may have declared a reduced RF Output Power (see clause 5.4.1 m)) and associated Duty Cycle (see clause 5.4.1 e)) that will ensure that the equipment meets the requirements for the Medium Utilization (MU) factors further described in clause 4.3.1.6. This is verified by the conformance test referred to in clause 4.3.1.6.4.

6.3 Test Procedure

Refer to ETSI EN 300 328 V2.2.2 Clause 5.4.2.2.1.3

6.4 Test Result

The equipment's output power is below 10dBm, no requirements for this item.

7. ACCUMULATED TRANSMIT TIME, FREQUENCY OCCUPATION AND HOPPING SEQUENCE

7.1 Block Diagram of Test Setup

7.2 Limit

For Non-adaptive FHSS equipment

The Accumulated Transmit Time on any hopping frequency shall not be greater than 15 ms within any observation period of 15 ms multiplied by the minimum number of hopping frequencies (N) that have to be used.

In order for the FHSS equipment to comply with the Frequency Occupation requirement, it shall meet either of the following two options:

Option 1: Each hopping frequency of the Hopping Sequence shall be occupied at least once within a period not exceeding four times the product of the dwell time and the number of hopping frequencies in use.

Option 2: The probability that each hopping frequency is occupied shall be between $((1 / U) \times 25 \%)$ and 77 % where U is the number of hopping frequencies in use.

The Hopping Sequence(s) shall contain at least N hopping frequencies where N is either 5 or the result of 15 MHz divided by the minimum Hopping Frequency Separation in MHz, whichever is the greater.

NOTE: See also clause 4.3.1.5.3.1 for the Hopping Frequency Separation applicable to non-adaptive FHSS equipment.

Non-Adaptive FHSS equipment, may blacklist some but not all hopping frequencies. From the N hopping frequencies defined above, the equipment shall transmit on at least one hopping frequency. For the blacklisted frequencies, the equipment has to occupy these frequencies for the duration of the average dwell time (see also definition for blacklisted frequency in clause 3.1).

For Adaptive FHSS equipment

Adaptive FHSS equipment shall be capable of operating over a minimum of 70 % of the band specified in table 1.

The Accumulated Transmit Time on any hopping frequency shall not be greater than 400 ms within any observation period of 400 ms multiplied by the minimum number of hopping frequencies (N) that have to be used.

In order for the FHSS equipment to comply with the Frequency Occupation requirement, it shall meet either of the following two options:

Option 1: Each hopping frequency of the Hopping Sequence shall be occupied at least once within a period not exceeding four times the product of the dwell time and the number of hopping frequencies in use.

Option 2: The occupation probability for each frequency shall be between $((1 / U) \times 25 \%)$ and 77 % where U is the number of hopping frequencies in use.

The Hopping Sequence(s) shall contain at least N hopping frequencies at all times, where N is either 15 or the result of 15 MHz divided by the minimum Hopping Frequency Separation in MHz, whichever is the greater.

NOTE: See also clause 4.3.1.5.3.2 for the Hopping Frequency Separation applicable to adaptive FHSS equipment.

For Adaptive FHSS equipment, from the N hopping frequencies defined above, the equipment shall consider at least one hopping frequency for its transmissions. Providing that there is no interference present on this hopping frequency with a level above the detection threshold defined in clause 4.3.1.7.2.2, point 5 or clause 4.3.1.7.3.2, point 5, then the equipment shall have transmissions on this hopping frequency. For Adaptive FHSS equipment using LBT, if a signal is detected during the CCA, the equipment may jump immediately to the next hopping frequency in the Hopping Sequence (see clause 4.3.1.7.2.2, point 2) provided the limit for Accumulated Transmit Time on the new hopping frequency is respected.

7.3 Test Procedure

Refer to ETSI EN 300 328 V2.2.2 Clause 5.4.4

7.4 Test Result

| Mode | Channel | Pulse time (ms) | Dwell time(ms) | Mini frequency occupation Time(ms) | Dwell time Limit (ms) | Number of hopping channel | Result |

8. HOPPING FREQUENCY SEPARATION

8.1 Block Diagram of Test Setup

8.2 Limit

For Non-adaptive FHSS equipment:

For non-adaptive FHSS equipment, the Hopping Frequency Separation shall be equal to or greater than the Occupied Channel Bandwidth (see clause 4.3.1.8), with a minimum separation of 100 kHz.

For FHSS equipment with a maximum declared RF Output power level of less than 10 dBm e.i.r.p. or for non-adaptive FHSS equipment operating in a mode where the RF Output power is less than 10 dBm e.i.r.p., the Hopping Frequency Separation shall be equal to or greater than 100 kHz.

For Adaptive FHSS equipment:

For adaptive FHSS equipment, the minimum Hopping Frequency Separation shall be 100 kHz.

Adaptive FHSS equipment that switched to a non-adaptive mode for one or more hopping frequencies because interference was detected on each of these hopping frequencies with a level above the threshold level defined in clause 4.3.1.7.2.2, point 5 or clause 4.3.1.7.3.2, point 5, does not have to comply with the Hopping Frequency Separation provided in clause 4.3.1.5.3.1 for non-adaptive FHSS equipment. If the Hopping Frequency Separation is below the Occupied Channel Bandwidth but greater than 100 kHz, the equipment is allowed to continue to operate with this Hopping Frequency Separation as long as the interference remains present on these hopping frequencies. As this relaxed Hopping Frequency Separation only applies to adaptive FHSS equipment, the FHSS equipment shall continue to operate in an adaptive mode on all other hopping frequencies.

Adaptive FHSS equipment which decided to operate in a non-adaptive mode on one or more hopping frequencies without the presence of interference, shall comply with the limit for Hopping Frequency Separation for non-adaptive FHSS equipment defined in clause 4.3.1.5.3.1 (first paragraph) for these hopping frequencies.

8.3 Test Procedure

Refer to ETSI EN 300 328 V2.2.2 Clause 5.4.5

8.4 Test Result

| Mode | Channel | Frequency Separation | Limit (MHz) | Result |
|------------|--------------|----------------------|-------------|--------|
| GFSK | Low/Mid/High | 0.98 | >0.1 | Pass |
| PI/4 DQPSK | Low/Mid/High | 1.01 | >0.1 | Pass |
| 8DPSK | Low/Mid/High | 1.01 | >0.1 | Pass |

9. ADAPTIVITY

9.1 Block Diagram of Test Setup

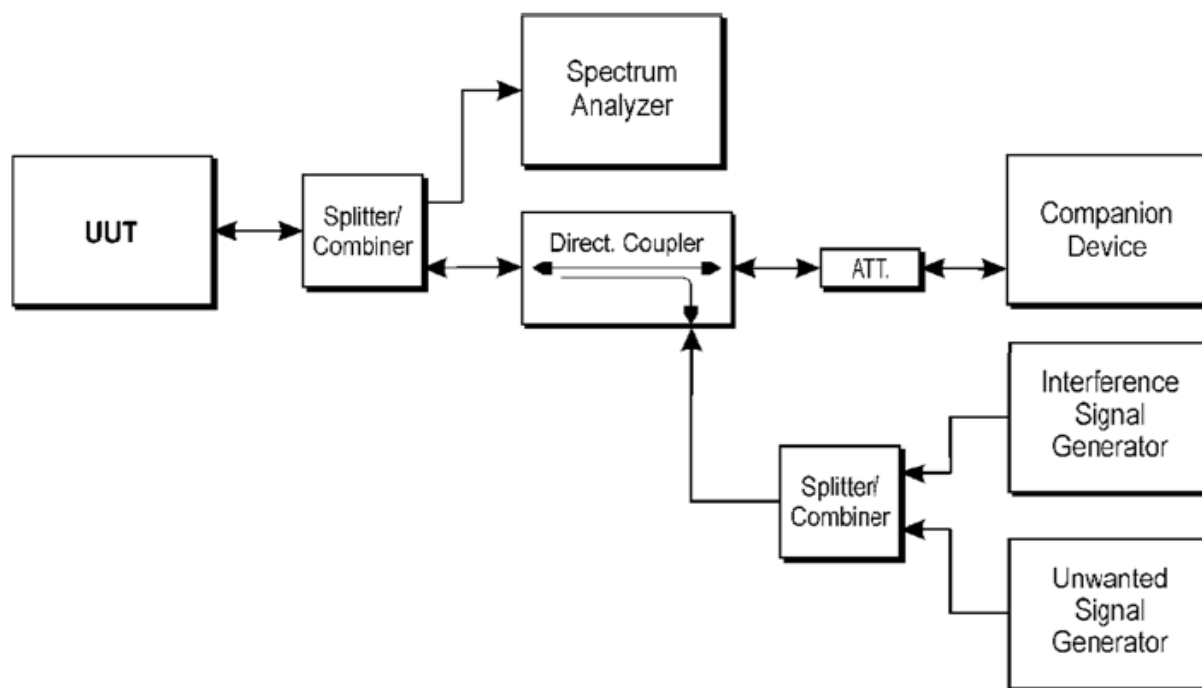

Figure 5: Test set-up for verifying the adaptivity of an equipment

9.2 Limit

Adaptive FHSS equipment using LBT shall comply with the following minimum set of requirements:

- 1) At the start of every dwell time, before transmission on a hopping frequency, the equipment shall perform a Clear Channel Assessment (CCA) check using energy detect. The CCA observation time shall be not less than 0,2 % of the Channel Occupancy Time with a minimum of 18 μ s. If the equipment finds the hopping frequency to be clear, it may transmit immediately.
- 2) If it is determined that a signal is present with a level above the detection threshold defined in step 5 the hopping frequency shall be marked as 'unavailable'. Then the equipment may jump to the next frequency in the hopping scheme even before the end of the dwell time, but in that case the 'unavailable' channel cannot be considered as being 'occupied' and shall be disregarded with respect to the requirement of the minimum number of hopping frequencies as defined in clause 4.3.1.4.3.2. Alternatively, the equipment can remain on the frequency during the remainder of the dwell time. However, if the equipment remains on the frequency with the intention to transmit, it shall perform an Extended CCA check in which the (unavailable) channel is observed for a random duration between the value defined for the CCA observation time in step 1 and 5 % of the Channel Occupancy Time defined in step 3. If the Extended CCA check has determined the frequency to be no longer occupied, the hopping frequency becomes available again. If the Extended CCA time has determined the channel still to be occupied, it shall perform new Extended CCA checks until the channel is no longer occupied.
- 3) The total time during which an equipment has transmissions on a given hopping frequency without reevaluating the availability of that frequency is defined as the Channel Occupancy Time. The Channel

Occupancy Time for a given hopping frequency, which starts immediately after a successful CCA, shall be less than 60 ms followed by an Idle Period of minimum 5 % of the Channel Occupancy Time with a minimum of 100 μ s.

After the Idle Period has expired, the procedure as in step 1 shall be repeated before having new transmissions on this hopping frequency during the same dwell time.

For LBT based adaptive FHSS equipment with a dwell time < 60 ms, the maximum Channel Occupancy Time is limited by the dwell time.

4) 'Unavailable' channels may be removed from or may remain in the Hopping Sequence, but in any case:

- apart from Short Control Signalling Transmissions referred to in clause 4.3.1.7.4, there shall be no transmissions on 'unavailable' channels;
- a minimum of N hopping frequencies as defined in clause 4.3.1.4.3.2 shall always be maintained.

5) The detection threshold shall be proportional to the transmit power of the transmitter: for a 20 dBm e.i.r.p. transmitter the detection threshold level (TL) shall be equal to or less than -70 dBm/MHz at the input to the receiver assuming a 0 dBi (receive) antenna assembly. This threshold level (TL) may be corrected for the (receive) antenna assembly gain (G); however, beamforming gain (Y) shall not be taken into account. For power levels less than 20 dBm e.i.r.p., the detection threshold level may be relaxed to:

$$TL = -70 \text{ dBm/MHz} + 10 \times \log_{10} (100 \text{ mW} / P_{\text{out}}) \quad (P_{\text{out}} \text{ in mW e.i.r.p.})$$

6) The equipment shall comply with the requirements defined in step 1 to step 4 of the present clause in the presence of an unwanted CW signal as defined in table 2.

Table 2: Unwanted Signal parameters

| Wanted signal mean power from companion device | Unwanted CW signal frequency (MHz) | Unwanted CW signal power (dBm) |
|---|------------------------------------|--------------------------------|
| sufficient to maintain the link (see note 2) | 2 395 or 2 488,5 (see note 1) | -35 (see note 3) |
| NOTE 1: The highest frequency shall be used for testing operating channels within the range 2 400 MHz to 2 442 MHz, while the lowest frequency shall be used for testing operating channels within the range 2 442 MHz to 2 483,5 MHz. See clause 5.4.6.1. | | |
| NOTE 2: A typical conducted value which can be used in most cases is -50 dBm/MHz. | | |
| NOTE 3: The level specified is the level at the UUT receiver input assuming a 0 dBi antenna assembly gain. In case of conducted measurements, this level has to be corrected for the (in-band) antenna assembly gain (G). In case of radiated measurements, this level is equivalent to a power flux density (PFD) in front of the UUT antenna. | | |

9.3 Test Procedure

Refer to ETSI EN 300 328 V2.2.2 Clause 5.4.6

9.4 Test Result

Not applicable

Note: The maximum output power of EUT less than 10dBm, so not applicable.

10. OCCUPIED CHANNEL BANDWIDTH

10.1 Block Diagram of Test Setup

10.2 Limit

The Occupied Channel Bandwidth shall be within the band given in 2.4GHz to 2.4835GHz..

In addition, for non-adaptive non-FHSS equipment with e.i.r.p. greater than 10 dBm, the Occupied Channel Bandwidth shall be equal to or less than 20MHz.

10.3 Test Procedure

Refer to ETSI EN 300 328 V2.2.2 Clause 5.4.7

Connect the UUT to the spectrum analyzer and use the following settings:

| | |
|-------------------|--|
| Centre Frequency: | The centre frequency of the channel under test |
| RBW | ~ 1 % of the span without going below 1 % |
| VBW | 3 × RBW |
| Frequency Span: | 2 × Nominal Channel Bandwidth |
| Detector Mode: | RMS |
| Trace Mode: | Max Hold |
| Sweep time: | 1s |

10.4 Test Result

| Test Mode | Test Channel | Occupied Bandwidth | Measured Frequency | | Limit | Result |

14. RECEIVER BLOCKING

14.1 Block Diagram of Test Setup

14.2 Limit

Table 14 contains the Receiver Blocking parameters for Receiver Category 1 equipment.

Table 14: Receiver Blocking parameters for Receiver Category 1 equipment

| Wanted signal mean power from companion device (dBm) (see notes 1 and 4) | Blocking signal frequency (MHz) | Blocking signal power (dBm) (see note 4) | Type of blocking signal |
|--|--|---|-------------------------|
| (-133 dBm + 10 × log ₁₀ (OCBW)) or -68 dBm whichever is less (see note 2) | 2 380 2 504 | -34 | CW |
| (-139 dBm + 10 × log ₁₀ (OCBW)) or -74 dBm whichever is less (see note 3) | 2 300 2 330 2 360 2 524 2 584 2 674 | | |

NOTE 1: OCBW is in Hz.

NOTE 2: In case of radiated measurements using a companion device and the level of the wanted signal from the companion device cannot be determined, a relative test may be performed using a wanted signal up to $P_{\min} + 26$ dB where P_{\min} is the minimum level of wanted signal required to meet the minimum performance criteria as defined in clause 4.3.1.12.3 in the absence of any blocking signal.

NOTE 3: In case of radiated measurements using a companion device and the level of the wanted signal from the companion device cannot be determined, a relative test may be performed using a wanted signal up to $P_{\min} + 20$ dB where P_{\min} is the minimum level of wanted signal required to meet the minimum performance criteria as defined in clause 4.3.1.12.3 in the absence of any blocking signal.

NOTE 4: The level specified is the level at the UUT receiver input assuming a 0 dBi antenna assembly gain. In case of conducted measurements, this level has to be corrected for the (in-band) antenna assembly gain (G). In case of radiated measurements, this level is equivalent to a power flux density (PFD) in front of the UUT antenna with the UUT being configured/positioned as recorded in clause 5.4.3.2.2.

Table 15 contains the Receiver Blocking parameters for Receiver Category 2 equipment.

Table 15: Receiver Blocking parameters receiver Category 2 equipment

| Wanted signal mean power from companion device (dBm) (see notes 1 and 3) | Blocking signal frequency (MHz) | Blocking signal power (dBm) (see note 3) | Type of blocking signal |
|---|----------------------------------|---|-------------------------|
| $(-139 \text{ dBm} + 10 \times \log_{10}(\text{OCBW}) + 10 \text{ dB})$ or $(-74 \text{ dBm} + 10 \text{ dB})$ whichever is less (see note 2) | 2 380 2 504 2 300 2 584 | -34 | CW |
| <p>NOTE 1: OCBW is in Hz.</p> <p>NOTE 2: In case of radiated measurements using a companion device and the level of the wanted signal from the companion device cannot be determined, a relative test may be performed using a wanted signal up to $P_{\min} + 26 \text{ dB}$ where P_{\min} is the minimum level of wanted signal required to meet the minimum performance criteria as defined in clause 4.3.1.12.3 in the absence of any blocking signal.</p> <p>NOTE 3: The level specified is the level at the UUT receiver input assuming a 0 dBi antenna assembly gain. In case of conducted measurements, this level has to be corrected for the (in-band) antenna assembly gain (G). In case of radiated measurements, this level is equivalent to a power flux density (PFD) in front of the UUT antenna with the UUT being configured/positioned as recorded in clause 5.4.3.2.2.</p> | | | |

Table 16 contains the Receiver Blocking parameters for Receiver Category 3 equipment.

Table 16: Receiver Blocking parameters receiver Category 3 equipment

| Wanted signal mean power from companion device (dBm) (see notes 1 and 3) | Blocking signal frequency (MHz) | Blocking signal power (dBm) (see note 3) | Type of blocking signal |
|---|----------------------------------|---|-------------------------|
| $(-139 \text{ dBm} + 10 \times \log_{10}(\text{OCBW}) + 20 \text{ dB})$ or $(-74 \text{ dBm} + 20 \text{ dB})$ whichever is less (see note 2) | 2 380 2 504 2 300 2 584 | -34 | CW |
| <p>NOTE 1: OCBW is in Hz.</p> <p>NOTE 2: In case of radiated measurements using a companion device and the level of the wanted signal from the companion device cannot be determined, a relative test may be performed using a wanted signal up to $P_{\min} + 30 \text{ dB}$ where P_{\min} is the minimum level of wanted signal required to meet the minimum performance criteria as defined in clause 4.3.1.12.3 in the absence of any blocking signal.</p> <p>NOTE 3: The level specified is the level at the UUT receiver input assuming a 0 dBi antenna assembly gain. In case of conducted measurements, this level has to be corrected for the (in-band) antenna assembly gain (G). In case of radiated measurements, this level is equivalent to a power flux density (PFD) in front of the UUT antenna with the UUT being configured/positioned as recorded in clause 5.4.3.2.2.</p> | | | |

14.3 Test Procedure

Refer to ETSI EN 300 328 V2.2.0 Clause 5.4.11.

14.4 Test Results

| Mode | Wanted Power(dBm) | Blocking Frequency (MHz) | Blocking Power(dB) | Measured PER (%) | Limit (%) |
|-----------|-------------------|--------------------------|--------------------|------------------|-----------|
| GFSK | -74 | 2380 | -34 | 0.22 | 10 |
| | -74 | 2504 | -34 | 0.35 | 10 |
| | -74 | 2300 | -34 | 0.43 | 10 |
| | -74 | 2584 | -34 | 0.44 | 10 |
| PI/4DQPSK | -74 | 2380 | -34 | 0.31 | 10 |
| | -74 | 2504 | -34 | 0.33 | 10 |
| | -74 | 2300 | -34 | 0.38 | 10 |
| | -74 | 2584 | -34 | 0.63 | 10 |
| 8DPSK | -74 | 2380 | -34 | 0.21 | 10 |
| | -74 | 2504 | -34 | 0.34 | 10 |
| | -74 | 2300 | -34 | 0.28 | 10 |
| | -74 | 2584 | -34 | 0.51 | 10 |

15. GEO-LOCATION CAPABILITY

15.1 Definition and Requirements

Geo-location capability is a feature of the equipment to determine its geographical location with the purpose to configure itself according to the regulatory requirements applicable at the geographical location where it operates.

The geo-location capability may be present in the equipment or in an external device (temporary) associated with the equipment operating at the same geographical location during the initial power up of the equipment. The geographical location may also be available in equipment already installed and operating at the same geographical location.

15.2 Test Results

This product doesn't support Geo-location.
