

RADIO TEST REPORT

Report No.: DL-20210425003-3E

Applicant: Nebra Ltd

Address: Unit 4 Bells Yew Green Business Court, Bells Yew Green, East Sussex, United Kingdom

Manufacturer: Shenzhen Eastech Company Limited.

2nd floor, 3rd building, Baishixia Development Area, Fuyong Street, Bao'an District, Address:

Shenzhen City, Guangdong Province, China.

EUT: Bluetooth 4.0 usb dongle

Trade Mark: N/A

Model Number: FX-8510A

Date of Receipt: Apr. 19, 2021

Test Date: Apr. 19, 2021 - Apr. 26, 2021

Date of Report: Apr. 26, 2021

Prepared By: Shenzhen DL Testing Technology Co., Ltd.

Address: 101-201, Building C, Shuanghuan, No.8, Baoqing Road, Baolong Industrial Zone, Baolong

Street, Longgang District, Shenzhen, Guangdong, China

Applicable Standards: ETSI EN 300 328 V2.2.2 (2019-07)

Test Result: Pass

Report Number: DL-20210425003-3E

Prepared (Engineer): Alisa Song

Reviewer (Supervisor): Jack Bu

Approved (Manager): Jade Yang

This test report is based on a single evaluation of one sample of above mentioned products. It is not permitted to be duplicated in extracts without written approval of Shenzhen DL Testing Technology Co., Ltd.

3. GENERAL INFORMATION

3.1 Description of Device (EUT)

EUT: Bluetooth 4.0 usb dongle

Trade Mark: N/A

Model Number: FX-8510A
Test Model: FX-8510A

Model difference: N/A
Power Supply: DC 5V
Receiver Category: 3

Operation Frequency: 2402~2480 MHz

Modulation Type: GFSK
Number of Channel: 40
Data Rate: 3Mbps

Antenna Type: Internal Antenna

Antenna Gain: 2dBi
Hardware Version: --Software Version: --Firmware: ---

Note1: For a more detailed features description, please refer to the manufacturer's specifications or the User's Manual.

ANNEX E.2

| a) | The | type | of | wideband | data | transmission | equipment: |
|----|-----|------|----|----------|------|--------------|------------|
|----|-----|------|----|----------|------|--------------|------------|

- □ FHSS
- non-FHSS

b) In case of FHSS:

•In case of non-Adaptive FHSS equipment:

The number of Hopping Frequencies:

•In case of Adaptive FHSS equipment:

The maximum number of Hopping Frequencies:

The minimum number of Hopping Frequencies:

•The (average) dwell time:

c) Adaptive / non-adaptive equipment:

- non-adaptive Equipment
- adaptive Equipment without the possibility to switch to a non-adaptive mode
- adaptive Equipment which can also operate in a non-adaptive mode

d) In case of adaptive equipment:

The Channel Occupancy Time implemented by the equipment: ms

- □ The equipment has implemented an LBT mechanism
- In case of non-FHSS equipment:
- □ The equipment is Frame Based equipment
- The equipment is Load Based equipment
- □ The equipment can switch dynamically between Frame Based and Load Based equipment

The CCA time implemented by the equipment: µs

- The equipment has implemented a DAA mechanism
- The equipment can operate in more than one adaptive mode

e) In case of non-adaptive Equipment:

The maximum RF Output Power (e.i.r.p.): -1.08dBm
The maximum (corresponding) Duty Cycle: %

Test Report Tel: 400-688-3552 Web:www.dl-cert.com Email: service@dl-cert.com Page 5 of 34

Equipment with dynamic behaviour, that behaviour is described here. (e.g. the different combinations of duty cycle and corresponding power levels to be declared):

RF OUTPUT POWER

Block Diagram of Test Setup

AV power meter EUT

Variable AC or DC power supply

Temperature Chamber

Report No.: DL-20210425003-3E

5.2 Limit

The RF output power for non-FHSS equipment shall be equal to or less than 20 dBm.

Notes: For Non-adaptive FHSS equipment, the manufacturer may have declared a reduced RF Output Power (seeclause 5.4.1 m)) and associated Duty Cycle (see clause 5.4.1 e)) that will ensure that the equipment meets the requirement for the Medium Utilization (MU) factor further described in clause 4.3.2.5. This is verified by the conformance test referred to in clause 4.3.2.5.4.

For non-adaptive non-FHSS equipment, where the manufacturer has declared an RF output power of less than 20 dBm e.i.r.p., the RF output power shall be equal to or less than that declared value.

6. POWER SPECTRAL DENSITY

6.1 Block Diagram of Test Setup

6.2 Limit

The maximum Power Spectral Density for non-FHSS equipment is 10 dBm per MHz.

6.3 Test Procedure

Refer to ETSI EN 300 328 V2.2.2 Clause 5.4.3

Connect the UUT to the spectrum analyzer and use the following settings:

| Start Frequency | 2400 MHz |
|-----------------|------------|
| Stop Frequency | 2483.5 MHz |
| RBW | 10KHz |
| VBW | 30KHz |
| Detector | RMS |
| Sweep points | >8350 |
| Trace | Max Hold |
| Trigger | Free Run |

6.4 Test Result

| Mode | Channel | Power Spectral Density (dBm/MHz) | Limit (dBm/MHz) | Conclusion |
|------|---------|----------------------------------|-----------------|------------|
| | Low | -6.16 | 10.00 | PASS |
| GFSK | Middle | -6.28 | 10.00 | PASS |
| | High | -6.85 | 10.00 | PASS |

7. ADAPTIVITY

7.1 Block Diagram of Test Setup

Report No.: DL-20210425003-3E

Figure 5: Test set-up for verifying the adaptivity of an equipment

7.2 Limit

Adaptive non-FHSS equipment using DAA shall comply with the following minimum set of requirements:

- 1) During normal operation, the equipment shall evaluate the presence of a signal on its current operating channel(s). If it is determined that a signal is present with a level above the detection threshold defined in step 5 that channel shall be marked as 'unavailable'.
- 2) The channel(s) shall remain unavailable for a minimum time equal to 1 s after which the channel may be considered again as an 'available' channel
- 3) The total time during which an equipment has transmissions on a given channel without re-evaluating the availability of that channel, is defined as the Channel Occupancy Time. The Channel Occupancy Time shall be less than 40 ms. Each such transmission sequence shall be followed by an Idle Period (no transmissions) of minimum 5 % of the Channel Occupancy Time with a minimum of 100 µs. After this, the procedure as in step 1 needs to be repeated.
- 4) The detection threshold shall be proportional to the transmit power of the transmitter: for a 20 dBm e.i.r.p. transmitter the detection threshold level (TL) shall be equal to or less than -70 dBm/MHz at the input to the receiver assuming a 0 dBi (receive) antenna assembly. This threshold level (TL) may be corrected for the (receive) antenna assembly gain (G); however, beamforming gain (Y) shall not be taken into account. For power levels less than 20 dBm e.i.r.p., the detection threshold level may be relaxed to:

 $TL = -70 \text{ dBm/MHz} + 10 \times \log 10 (100 \text{ mW} / P_{out}) (P_{out} \text{ in mW e.i.r.p.})$

5) The equipment shall comply with the requirements defined in step 1 to step 4 of the present clause in the

Test Report Tel: 400-688-3552 Web:www.dl-cert.com Email: service@dl-cert.com Page 16 of 34

presence of an unwanted CW signal as defined in table 9.

Table 9: Unwanted Signal parameters

Report No.: DL-20210425003-3E

| Wanted signal mean power from companion device (dBm) | | Unwanted signal frequency (MHz) | Unwanted CW signal power (dBm) |
|--|--------------|---------------------------------------|---|
| | -30 | 2 395 or 2 488,5 | -35 |
| | (see note 2) | (see note 1) | (see note 2) |
| NOTE 1: The highest frequency shall be used for testing operating chann within the range 2 400 MHz to 2 442 MHz, while the lowest frequency shall be used for testing operating channels within the range 2 442 MHz to 2 483,5 MHz. See clause 5.4.6.1. | | | |
| NOTE 2: The level specified is the level at the UUT receiver input assumi 0 dBi antenna assembly gain. In case of conducted measureme this level has to be corrected for the (in-band) antenna assembly gain (G). In case of radiated measurements, this level is equival to a power flux density in front of the UUT antenna. | | | icted measurements, antenna assembly is level is equivalent |

7.3 Test Procedure

Refer to ETSI EN 300 328 V2.2.2 Clause 5.4.6

7.4 Test Result

Not applicable

Note: The maximum output power of EUT less than 10dBm, so not applicable.

Test Report Tel: 400-688-3552 Web:www.dl-cert.com Email: service@dl-cert.com Page 17 of 34

8. OCCUPIED CHANNEL BANDWIDTH

8.1 Block Diagram of Test Setup

8.2 Limit

The Occupied Channel Bandwidth shall be within the band given in 2.4GHz to 2.4835GHz...

In addition, for non-adaptive non-FHSS equipment with e.i.r.p. greater than 10 dBm, the Occupied Channel Bandwidth shall be equal to or less than 20MHz.

Report No.: DL-20210425003-3E

8.3 Test Procedure

Refer to ETSI EN 300 328 V2.2.2 Clause 5.4.7

Connect the UUT to the spectrum analyzer and use the following settings:

| Centre Frequency: | The centre frequency of the channel under test | | | | |
|-------------------|--|--|--|--|--|
| RBW | ~ 1 % of the span without going below 1 % | | | | |
| VBW | 3 × RBW | | | | |
| Frequency Span: | 2 × Nominal Channel Bandwidth | | | | |
| Detector Mode: | RMS | | | | |
| Trace Mode: | Max Hold | | | | |
| Sweep time: | 1s & X | | | | |

12. RECEIVER BLOCKING

12.1 Block Diagram of Test Setup

Report No.: DL-20210425003-3E

12.2 Limit

Table 14 contains the Receiver Blocking parameters for Receiver Category 1 equipment.

Table 14: Receiver Blocking parameters for Receiver Category 1 equipment

| Wanted signal mean power from companion device (dBm) (see notes 1 and 4) | Blocking signal frequency (MHz) | Blocking signal power (dBm) (see note 4) | Type of blocking signal |
|--|--|--|-------------------------------|
| (-133 dBm + 10 × log ₁₀ (OCBW)) or -68 dBm whichever is less (see note 2) | 2 380 2 504 | | |
| (-139 dBm + 10 × log ₁₀ (OCBW)) or -74 dBm whichever is less (see note 3) | 2 300 2 330 2 360 2 524 2 584 2 674 | -34 | CW |

NOTE 1: OCBW is in Hz.

NOTE 2: In case of radiated measurements using a companion device and the level of the wanted signal from the companion device cannot be determined, a relative test may be performed using a wanted signal up to P_{min} + 26 dB where P_{min} is the minimum level of wanted signal required to meet the minimum performance criteria as defined in clause 4.3.1.12.3 in the absence of any blocking signal.

NOTE 3: In case of radiated measurements using a companion device and the level of the wanted signal from the companion device cannot be determined, a relative test may be performed using a wanted signal up to P_{min} + 20 dB where P_{min} is the minimum level of wanted signal required to meet the minimum performance criteria as defined in clause 4.3.1.12.3 in the absence of any blocking signal.

NOTE 4: The level specified is the level at the UUT receiver input assuming a 0 dBi antenna assembly gain. In case of conducted measurements, this level has to be corrected for the (in-band) antenna assembly gain (G). In case of radiated measurements, this level is equivalent to a power flux density (PFD) in front of the UUT antenna with the UUT being configured/positioned as recorded in clause 5.4.3.2.2.

Table 15 contains the Receiver Blocking parameters for Receiver Category 2 equipment.

Table 15: Receiver Blocking parameters receiver Category 2 equipment

Report No.: DL-20210425003-3E

| Wanted signal mean power from companion device (dBm) (see notes 1 and 3) | Blocking signal frequency (MHz) | Blocking signal power (dBm) (see note 3) | Type of blocking signal |
|--|--|---|----------------------------|
| (-139 dBm + 10 × log ₁₀ (OCBW) + 10 dB) or (-74 dBm + 10 dB) whichever is less (see note 2) | 2 380 2 504 2 300 2 584 | -34 | cw |

OCBW is in Hz.

NOTE 1: NOTE 2: In case of radiated measurements using a companion device and the level of the wanted signal from the companion device cannot be determined, a relative test may be performed using a wanted signal up to P_{\min} + 26 dB where P_{\min} is the minimum level of wanted signal required to meet the minimum performance criteria as defined in clause 4.3.1.12.3 in the absence of any blocking signal.

The level specified is the level at the UUT receiver input assuming a 0 dBi antenna assembly gain. In case of conducted measurements, this level has to be corrected for the (in-band) antenna assembly gain (G). In case of radiated measurements, this level is equivalent to a power flux density (PFD) in front of the UUT antenna with the UUT being configured/positioned as recorded in clause 5.4.3.2.2.

Table 16 contains the Receiver Blocking parameters for Receiver Category 3 equipment.

Table 16: Receiver Blocking parameters receiver Category 3 equipment

| Wanted signal mean power from companion device (dBm) (see notes 1 and 3) | Blocking signal frequency (MHz) | Blocking signal power (dBm) (see note 3) | Type of blocking signal |
|--|--|---|----------------------------|
| (-139 dBm + 10 × log ₁₀ (OCBW) + 20 dB) or (-74 dBm + 20 dB) whichever is less (see note 2) | 2 380 2 504 2 300 2 584 | -34 | cw |

NOTE 1: OCBW is in Hz.

NOTE 2: In case of radiated measurements using a companion device and the level of the wanted signal from the companion device cannot be determined, a relative test may be performed using a wanted signal up to P_{\min} + 30 dB where P_{\min} is the minimum level of wanted signal required to meet the minimum performance criteria as defined in clause 4.3.1.12.3 in the absence of any blocking signal.

NOTE 3: The level specified is the level at the UUT receiver input assuming a 0 dBi antenna assembly gain. In case of conducted measurements, this level has to be corrected for the (in-band) antenna assembly gain (G). In case of radiated measurements, this level is equivalent to a power flux density (PFD) in front of the UUT antenna with the UUT being configured/positioned as recorded in clause 5.4.3.2.2

13. GEO-LOCATION CAPABILITY

13.1 Definition and Requirements

Geo-location capability is a feature of the equipment to determine its geographical location with the purpose to configure itself according to the regulatory requirements applicable at the geographical location where it operates.

Report No.: DL-20210425003-3E

The geo-location capability may be present in the equipment or in an external device (temporary) associated with the equipment operating at the same geographical location during the initial power up of the equipment. The geographical location may also be available in equipment already installed and operating at the same geographical location.

13.2 Test Results

This product doesn't support Geo-location.
